

## LOST ROUND 8

---

### TOSS-UP

1) Physics – *Short Answer* Helium-3 is unable to form a superfluid through the same mechanism as helium-4 due to its fermionic character. Instead, helium-3 atoms below their lambda point form what type of bosonic pairs to condense?

ANSWER: COOPER PAIR

### BONUS

1) Physics – *Short Answer* A 1 coulomb charged particle travels through an electromagnetic field whose electric and magnetic fields are described by the vector functions  $\mathbf{x}\mathbf{i} - \mathbf{z}\mathbf{k}$  and  $-\mathbf{y}\mathbf{j} + \mathbf{z}\mathbf{k}$ , respectively. The particle travels with a velocity described by the vector function  $-\mathbf{x}\mathbf{i}$ . What is the magnitude of the electromagnetic force experienced by the particle at the point  $<1, -1, 2>$  in newtons?

ANSWER:  $\sqrt{14}$

---

### TOSS-UP

2) Energy – *Short Answer* Scientists at Princeton Plasma Physics Laboratory have been studying the data from the Carrington event which was characterized by a large solar storm where a massive amount of ionized particles was directed towards the earth. Which event, occurring on the Sun, is responsible for these solar storms?

ANSWER: CORONAL MASS EJECTION (ACCEPT: SOLAR FLARES)

### BONUS

2) Energy – *Short Answer* Scientists at Brookhaven National Lab used laser pulses to twist the crystal lattice of zirconium pentatelluride, activating Weyl nodes in the material to create a dissipationless electron current. Light-activated zirconium pentatelluride is an example of what type of solid-state material?

ANSWER: SEMI METAL      (DO NOT ACCEPT: HALF METAL, METAL, METALLOID, ETC)

### **TOSS-UP**

3) Chemistry – *Multiple Choice* Which of the following molecules does NOT have two distinct bond lengths in the gas phase?

- W) Sulfur tetrafluoride
- X) Bromine trifluoride
- Y) Xenon tetroxide
- Z) 1,3-butadiene

ANSWER: Y) XENON TETROXIDE

### **BONUS**

3) Chemistry – *Short Answer* Identify all of the following three compounds that exhibit a decrease in bond angle upon single ionization: 1) PF<sub>3</sub>; 2) XeF<sub>2</sub>; 3) XeF<sub>4</sub>.

ANSWER: 2 AND 3

---

### **TOSS-UP**

4) Biology – *Short Answer* Bacteriorhodopsin is an archaeal proton pump that serves to power the proton gradient on the plasma membrane. In plants, what is the analogous complex?

ANSWER: CYTOCHROME B<sub>6</sub>F

### **BONUS**

4) Biology – *Short Answer* Once neutrophils have phagocytosed a bacterium, via what process are large amounts of reactive oxygen species generated from NOX2 to destroy the bacterial species?

ANSWER: RESPIRATORY BURST (ACCEPT: OXIDATIVE BURST)

## **TOSS-UP**

5) Math – *Short Answer* What is the remainder when 56! is divided by 57?

ANSWER: 0

## **BONUS**

5) Math – *Short Answer* All permutations of the word ABRA, spelled A-B-R-A, are arranged in alphabetical order and written one after another with no spaces in between. What is the 20th letter in this string?

ANSWER: B

---

## **TOSS-UP**

6) Earth and Space – *Multiple Choice* Agglutinate is welded volcanic bombs when they are hot. In which of the following volcano types would one likely find agglutinate?

- W) Cryptodome
- X) Splatter cone
- Y) Cinder Cone
- Z) Submarine volcano

ANSWER: X) SPLATTER CONE

## **BONUS**

6) Earth and Space – *Short Answer* Order the following three regions of a medium size Population II star's lifetime in chronological order: 1) Asymptotic giant branch; 2) Red giant branch; 3) Horizontal branch.

ANSWER: 2, 3, 1

## **TOSS-UP**

7) Physics – *Multiple Choice* A spaceship travels at a constant velocity of  $0.75c$  relative to an observer on Earth. A relativistic bullet is fired inside at a constant velocity of  $0.25c$  relative to the spaceship **OPPOSITE** to the trajectory of the spaceship. Which of the following is closest to the speed of the relativistic bullet relative to the observer on Earth?

- W)  $0.5c$
- X)  $0.6c$
- Y)  $0.7c$
- Z)  $0.8c$

ANSWER: X)  $0.6c$

## **BONUS**

7) Physics – *Short Answer* Identify all of the following three disadvantages that an iron core inductor has over an air core inductor: 1) Smaller inductance; 2) Hysteresis losses; 3) Eddy current losses.

ANSWER: 2 AND 3

---

## **TOSS-UP**

8) Energy – *Short Answer* Scientists at Argonne National Lab used  $^1\text{H}$  NMR **[H one N-M-R]** spectroscopy to study fullerene derivatives for use in photovoltaic cells. Order the following three protons in the scientist's  $^1\text{H-NMR}$  spectrum in increasing chemical shift: 1) Vinylic; 2) Aryl; 3) Aldehyde.

ANSWER: 1, 2, 3

## **BONUS**

8) Energy – *Multiple Choice* Researchers from Brookhaven National Lab discovered new aerosol particles capable of seeding clouds that are formed from dimethyl sulfide in the troposphere. Where would these aerosol particles most likely be found seeding new clouds?

- W) Amazon Rainforest
- X) Yellowstone
- Y) Azores
- Z) Rocky Mountains

ANSWER: Y) AZORES

## **TOSS-UP**

9) Chemistry – *Short Answer* Identify all of the following three organic reactions that have an overall kinetic order of 2:  
1) Tert-butanol dehydration in strong acid; 2) Epoxide ring-opening in strong base; 3) Maleic anhydride reacting with 1,3-butadiene.

ANSWER: 2 AND 3

## **BONUS**

9) Chemistry – *Short Answer* Consider the reaction of acetaldehyde in a cold solution of dilute sodium hydroxide. What is the IUPAC name of the major product formed in this reaction?

ANSWER: 3-HYDROXYBUTANAL

---

## **TOSS-UP**

10) Biology – *Multiple Choice* Which of the following best characterizes the preganglionic synapse of sympathetic innervated neurons?

- W) Norepinephrine on  $\beta$ -receptors
- X) Acetylcholine on muscarinic receptors
- Y) Norepinephrine on  $\alpha$ -receptors
- Z) Acetylcholine on nicotinic receptors

ANSWER: Z) ACETYLCHOLINE ON NICOTINIC RECEPTORS

## **BONUS**

10) Biology – *Short Answer* Which eicosanoid **[I-co-sa-noid]** is a profound inhibitor of platelet aggregation, and is released by endothelial cells?

ANSWER: PROSTACYCLIN

## **TOSS-UP**

- 11) Math – *Short Answer* What is the radius of convergence of the series with  $n$ th term  $\frac{nx^n}{3^n}$  /the fraction with numerator  $n$  times  $x$  to the  $n$  and denominator  $3$  to the  $n$ ?

ANSWER: 3

## **BONUS**

- 11) Math – *Short Answer* How many ordered pairs of nonnegative integers  $(x, y)$  satisfy the equation  $\frac{2}{x} + \frac{1}{y} = 1$ ?

ANSWER: 2

---

## **TOSS-UP**

- 12) Earth and Space – *Short Answer* Order the following three metamorphic facies in order of increasing temperature of formation: 1) Granulite; 2) Blueschist; 3) Amphibolite.

ANSWER: 2, 3, 1

## **BONUS**

- 12) Earth and Space – *Short Answer* Identify all of the following three statements that are true of Mercury: 1) Opposite to the Caloris basin, lineated terrain is found; 2) It possesses a 2:3 resonance for orbit to rotation; 3) It possesses a magnetic field.

ANSWER: ALL

## **TOSS-UP**

13) Physics – *Short Answer* In a canonical ensemble with  $n$  degenerate energy states, each state has an energy of  $E$  joules. Identify all of the following three changes that would increase the residual entropy of the canonical ensemble: 1) Increase  $n$  and decrease  $E$ ; 2) Increase  $n$  only; 3) Increase  $E$  only.

ANSWER: 1 AND 2

## **BONUS**

13) Physics – *Short Answer* Answer the following two questions about the Hamiltonian operator in quantum mechanics:

1. The eigenvalues of the Hamiltonian operator correspond with what scalar?
2. The Hamiltonian is an example of what type of operator in Hilbert space that is self-adjoint?

ANSWER: 1) ENERGY; 2) HERMITIAN

---

## **TOSS-UP**

14) Energy – *Short Answer* Scientists at Brookhaven National Lab are trying to calculate the anomalous magnetic moment of muons by factoring in virtual photons to their calculations. The probability of the production and reabsorption of a virtual photon from a muon is equivalent to what dimensionless constant?

ANSWER: FINE STRUCTURE

## **BONUS**

14) Energy – *Short Answer* Scientists at SLAC National Accelerator lab are studying the properties of C4 photosynthesis. Identify all of the following three statements that are true of C4 photosynthesis: 1) Rubisco is concentrated within mesophyll cells; 2) Malate is transported from mesophyll to bundle sheath cell through the symplast; 3) It is more water efficient than C3 photosynthesis.

ANSWER: 2 AND 3

## **TOSS-UP**

15) Chemistry – *Short Answer* What is the IUPAC name for the major organic product when benzaldehyde is treated with meta-chloro-peroxybenzoic acid?

ANSWER: BENZOIC ACID

## **BONUS**

15) Chemistry – *Short Answer* A reaction has the following three-step mechanism: Step 1 is A + B yields C in rapid equilibrium; Step 2 is C yields D + E in rapid equilibrium; Step 3 is A + E yields F slowly and irreversibly *[read each step slowly]*. What is the order of each rate-determining species in the rate law of the reaction?

ANSWER: A = 2; B = 1; D = -1

---

## **TOSS-UP**

16) Biology – *Short Answer* While most hormones from the pituitary gland are released in a continuous fashion, which hormone is released in a pulsatile fashion during sleep?

ANSWER: GROWTH HORMONE

## **BONUS**

16) Biology – *Multiple Choice* Which of the following mechanisms of action does the anticoagulant warfarin function by?

- W) Inhibiting synthesis of thromboxanes
- X) Inhibiting Vitamin K metabolism
- Y) Increasing affinity of antithrombin for thrombin
- Z) Increasing affinity of thrombomodulin for thrombin and protein C

ANSWER: X) INHIBITING VITAMIN K METABOLISM

## **TOSS-UP**

17) Math – *Short Answer* What adjective is given to a square matrix with zeros along its main diagonal?

ANSWER: HOLLOW

## **BONUS**

17) Math – *Short Answer* Daniel is looking for Digletts in Diglett Cave. The probability that Daniel has seen a Diglett after spending  $t$  minutes in the cave is given by the function  $P(t) = 1 - 2^{-t}$ . What is the probability that Daniel sees a Diglett for the first time between the times  $t = 2$  and  $t = 3$ ?

ANSWER: 7/32

---

## **TOSS-UP**

18) Earth and Space – *Multiple Choice* Which of the following best explains why Saturn is hotter than expected?

- W) Contraction of the inner core of the planet releases gravitational potential energy that is radiated as heat
- X) Infalling helium droplets in the liquid hydrogen interior releases gravitational potential energy as they gain kinetic energy
- Y) Tidal heating from Titan and it's retrograde orbit distorts part of the inner core
- Z) The rapid rotation induced by the dynamo effect causes frictional heating between the cloud layers and the liquid metallic hydrogen, inducing heat release

ANSWER: X) INFALLING HELIUM DROPLETS IN THE LIQUID HYDROGEN INTERIOR RELEASES GRAVITATIONAL POTENTIAL ENERGY AS THEY GAIN KINETIC ENERGY

## **BONUS**

18) Earth and Space – *Short Answer* In contrast to the main rings of Jupiter which lie within the Roche lobe of the planet, the impact dust from Amalthea and Thebe form another ring of Jupiter known by what name?

ANSWER: GOSSAMER RINGS

## **TOSS-UP**

19) Physics – *Multiple Choice* When a uniform breeze blows over the top of a playing card for a short duration of time, the card is launched upwards a distance  $d$ . If the speed of the breeze is doubled and it blows over the card for the same amount of time, how high will the card be launched?

- W)  $2d$
- X)  $4d$
- Y)  $8d$
- Z)  $16d$

ANSWER: Z)  $16d$

## **BONUS**

19) Physics – *Short Answer* An eight state system is immersed in a heat bath at a temperature  $T$  such that half the states have an energy of  $kT$  and the remaining states have an energy of  $2kT$ . To the nearest integer percent, what is the probability of a particle in the system occupying a lower energy state?

ANSWER: 83

---

## **TOSS-UP**

20) Energy – *Short Answer* Scientists at SLAC National Accelerator Laboratory used cryo-EM to image herpes viruses that are able to remain latent and hidden within the golgi body of the cell. They took inspiration from patients who had contracted chicken pox or were experiencing a shingles flareup which is also caused by a latent virus. What virus is responsible for the juvenile form of chickenpox and later dermatome form of shingles?

ANSWER: VARICELLA ZOSTER

## **BONUS**

20) Energy – *Short Answer* Scientists at SLAC National Accelerator Lab put  $\text{CsPbI}_3$  under high pressures in a diamond anvil to permanently transform it into its black phase for more efficient and lasting use in solar cells. Identify all of the following three compounds that have an analogous crystal structure to the black phase of  $\text{CsPbI}_3$ : 1)  $\text{TiO}_2$ ; 2)  $\text{MgSiO}_3$ ; 3)  $\text{Fe}_3\text{O}_4$ .

ANSWER: 2 ONLY

## **TOSS-UP**

21) Chemistry – *Short Answer* Order the following three protons in increasing acidity: 1) Nitrile alpha proton; 2) Phenol labile proton; 3) Acetic acid-labile proton.

ANSWER: 1, 2, 3

## **BONUS**

21) Chemistry – *Short Answer* Order the following three compounds in increasing wavelength of maximum absorption in UV-Vis spectroscopy: 1) Acetone; 2) Prussian Blue; 3) Ethylene.

ANSWER: 3, 1, 2

---

## **TOSS-UP**

22) Biology – *Short Answer* Normally, the bulk of negative pressure in trees is from transpiration in the water air boundary leaves. However, when root pressure exceeds this negative pressure, what process, characterized by the secretion of exudate from the hydathodes of vein endings, occurs?

ANSWER: GUTTATION

## **BONUS**

22) Biology – *Multiple Choice* In which of the following organisms would trimethylamine oxide be most abundant?

- W) Salmon
- X) Shark
- Y) Bird
- Z) Gorilla

ANSWER: X) SHARK

## **TOSS-UP**

23) Math – *Multiple Choice* Which of the following must be true of conservative vector fields?

- W) The divergence is everywhere zero
- X) The curl is everywhere zero
- Y) The divergence is everywhere nonzero
- Z) The curl is everywhere nonzero

ANSWER: X) THE CURL IS EVERYWHERE ZERO

## **BONUS**

23) Math – *Short Answer* Two congruent squares with side length 1 share the same center, but are rotated  $30^\circ$  relative to each other. What is the area of the star-shaped region bounded by the two squares?

ANSWER:  $2\sqrt{3}/3$

---

## **TOSS-UP**

24) Earth and Space – *Short Answer* What sedimentary rock is characteristic of pedocals, where calcium carbonate welds sediment together, often in semiarid regions?

ANSWER: CALICHE

## **BONUS**

24) Earth and Space – *Multiple Choice* Which of the following best describes the blackbody curve of the sun, which plots decreasing wavelength vs temperature?

- W) Symmetric curve about  $\lambda_{\max}$
- X) Distinct line at  $\lambda_{\max}$
- Y) Decreased slope below  $\lambda_{\max}$  and increased above  $\lambda_{\max}$
- Z) Increased slope below  $\lambda_{\max}$  and increase slope above  $\lambda_{\max}$

ANSWER: Y) DECREASED SLOPE BELOW AND INCREASED ABOVE  $\lambda_{\max}$

## **TOSS-UP**

25) Physics – *Short Answer* The amplitude of a wave is given by the function  $y(x, t) = e^{x-2t}$  [*y of x comma t equals e to the power of the quantity x minus 2t*], with  $x$  in meters and  $t$  in seconds. What is the speed of propagation of this wave in meters per second?

ANSWER: 0.5

## **BONUS**

25) Physics – *Short Answer* An RLC circuit is constructed with a resistance  $R$ , inductance  $L$ , and capacitance  $C$  all placed in series. The circuit has oscillations driven by a sinusoidal power source. Identify all of the following four quantities that would decrease if  $R$  were decreased: 1) Amplitude; 2) Bandwidth; 3) Resonant frequency; 4) Q factor.

ANSWER: 2 ONLY
